Quality

twitter_archive table

- timestamp datatype is in object instead of datetime
- Only include tweets with no retweets
- The columns such as the in_reply_to_status_id, in_reply_to_user_id, retweeted_status_id needs to be drop
- the column name contains value such as None, a, by and so on
- the rating_denominator have some values greater than or less than 10 which should be all 10
- the numerator_rating have some values that are way above the scale which is something like 920 and so

image_predictions table

- The column p1 and p3 contains values that are inconsistent which are some name written in underscore, some not in underscore, some the entire letters in lowercase and some are not entirely in lowercase

twitter_archive_master table

- the datatype of the source_name and source_link should be category instead of object
- the datatype of the columns p1_dog, p2_dog and p3_dog are in object instead of boolean

Tidiness

- The columns such as doggo, floofer, pupper and puppo in the twitter_archive table should be combine into a single columns called dog_stage
- The column source in the twitter_archive table should be splits into two new columns called source_name and source_link
- The twitter_archive, image_predictions, and additional_tweets_info table needs to be merged
